

TPCA Member Health Centers:

In collaboration with Brandy Dalton from Mercy Community Healthcare, Ashley Pasquariello, TPCA's Data Analyst, has created a draft of the VFC report for i2iTracks. Please consult the linked instructions for how to import an iPHA report into i2iTracks. The measures and thresholds/targets in this report align with the Quality Metrics for Family Practices measures included in the PCMH Provider Operating Manual. When you import this report, map the data elements to the allowable claims data for the HEDIS quality stars (CPT/ICD codes outlined in the HEDIS reference file). The data elements in this report should all be unique from any of the existing data elements in your library. Therefore, any mapping that you do will not change the existing mapping for your other iPHA reports. As always, email Ashley Pasquariello (ashley.pasquariello@tnpca.org) if you'd like help with any steps of this process, or if you run into errors/revisions that need to be made.
